

StayOS — Legal, Accounting & Regulatory Readiness (Egypt)

Version v4 — 2026-10-04 · READINESS / REFERENCE DOCUMENT — NOT LEGAL ADVICE

Reconciled against current engineering reality (repository + production config, verified 2026-10-04). Labels:
IMPLEMENTED = code-verified · OPERATIONAL DEPENDENCY = needs external provisioning · REVIEW = requires counsel/accountant confirmation.

Commercial Model

Item	Engineering state	Professional item
Model B	IMPLEMENTED — host 6% + guest 6% = 12% of accommodation; cleaning per-stay; all-inclusive guest UX; internals never guest-visible (test-enforced)	Founder decision; no action
VAT	IMPLEMENTED at 14% assumption (TAX_VAT_RATE); posted on platform share	ACCOUNTANT-TO-CONFIRM: exact VAT base and rate
Money flow	IMPLEMENTED — guest funds captured into designated funds-holding accounts; released to host payable balance at check-in +24h	REVIEW: legal characterization of fund flows (engineering does not represent these as legal escrow)

Payments

Item	Engineering state	Professional item
Paymob Accept	IMPLEMENTED — Intention flow, HMAC webhooks, idempotent reconciliation, transaction refs stored. Current credential is a TEST key (sandbox) — end-to-end flow verified, no real-money capture yet	EXTERNAL ITEM — live merchant credentials required before real-money launch
Refunds	IMPLEMENTED — full/partial, ledger reversal, provider refund ref	None pending
Paymob Payouts	NOT PROVISIONED — rail code exists; creds unissued; host payouts run manual via ops queue	EXTERNAL BLOCKER — Paymob merchant provisioning
Manual bank transfer	IMPLEMENTED — proof-upload flow	BLOCKER — PAYMENT_BANK_* placeholders must be replaced with real account details before reliance

KYC / Identity

Item	Engineering state	Professional item
Manual KYC	IMPLEMENTED + ACTIVE — document upload, private bucket, admin review queue	REVIEW: retention/deletion policy under PDPL

Sumsub automation	IMPLEMENTED ARCHITECTURE — provider adapter, WebSDK, signed webhooks; PRODUCTION NOT ACTIVATED (KYC_VERIFICATION_MODE=manual, creds unset)	EXTERNAL BLOCKER — provisioning + privacy approval; do NOT claim automated KYC is live
-------------------	--	--

Data protection & consumer

Item	Engineering state	Professional item
PDPL	Technical measures: server-side authz, PII redaction, private storage, audit log	REVIEW: PDPL compliance program, data-processing terms, breach procedures
Consumer protection	Implemented: cancellation policy display, refund engine, support channel	REVIEW: terms of service, cancellation policy wording, complaint handling
Terms / Privacy	Surface exists; content requires counsel review	REVIEW — not represented as finalized legal docs

Regulatory

Item	Engineering state	Professional item
Entity status	N/A engineering	FOUNDER/LLEGAL — entity formation status not established in repo
Tourism/short-let law	N/A engineering	REVIEW: short-term rental licensing obligations in target areas
E-invoice / e-receipt	NO CODE PATH — not integrated	LEGAL/ACCOUNTING OPEN ITEM — ETA registration timing

Pre-launch configuration gate

Verified 2026-10-04: production service runs ENVIRONMENT=staging, which keeps a development token endpoint reachable and pairs with the sandbox Paymob credential. Before public launch: provision live Paymob credentials, set real manual-transfer values (if the rail is used), then set ENVIRONMENT=production — in that order, since the payments layer fails closed on a test key under production.

Change log v4: fund-flow wording neutralized (designated funds-holding accounts; no legal-escrow claim); Paymob Accept corrected to sandbox-verified (test key); manual-transfer placeholders flagged; KYC manual-mode confirmed via production env; stale AWS deploy workflows archived (Railway/Vercel actual); pre-launch ENVIRONMENT gate documented. No legal conclusions altered — all REVIEW items remain open pending counsel/accountant.
