

STAYOS — FOUNDER ACTION & DECISION PACK

Legal + Commercial Readiness | 26 August 2026

Purpose: This document contains only actions, decisions, confirmations, and external steps that cannot safely be delegated to an execution agent. It is designed to be worked through as a checklist.

1. Current Readiness — Executive View

Area	Current position	Founder / external action
Commercial rules	Mostly closed	Resolve the Alpha-rate conflict if still unresolved.
Real-money readiness	NOT READY	Provide a real collection account and clear legal blockers.
Legal	CONDITIONAL	Counsel must address payment-role/licensing, PDPL/KYC and platform lia
Paymob	READY TO CONTACT	Send the finalized requirements request; wait for written confirmation.
Supply	Not started at scale	Acquire and authorize real hosts/listings.

2. P0 — Must Be Cleared Before Real Money

- **Real StayOS collection account:** provide/designate the real bank or Vodafone Cash collection destination that replaces the placeholder payment instructions. Never put secrets in the repository.
- **Legal entity / registration:** provide the current legal entity name and registration details required for disclosures and counsel review.
- **Egyptian counsel:** engage counsel and obtain written answers on payment-system/PSP licensing, the legal characterization of the StayOS-controlled funds model, platform role/liability, PDPL/KYC, consumer disclosures, and short-term-rental regulatory status.
- **Alpha commercial-rate decision:** resolve the documented conflict between the financial draft showing 0% platform commission during Alpha and the latest legal/commercial sprint showing 10% + 2% host-side deductions plus 4% guest fee. Do not let both remain live.
- **Refund policy confirmation:** confirm the final refund tiers, deadlines, and the concrete refund_days value used in customer-facing messages.
- **Host payout commitment:** confirm the payout method and timing that StayOS is actually prepared to honor.

3. Paymob — Founder-Owned External Action

- Send PAYMOB_REQUIREMENTS_REQUEST.md exactly after a final founder review.
- Keep the status as READY TO SEND until the message is actually dispatched.
- Request written confirmation of marketplace/split-payment support, host onboarding/KYC, settlement timing, refunds, chargebacks, webhooks/reconciliation, StayOS onboarding/entity requirements, sandbox access, production timeline, fees, and Vodafone Cash/Fawry/Meeza support.
- Do not treat Paymob marketing material as confirmation of the exact StayOS structure.
- Preserve the written Paymob response as evidence before engineering begins integration work.

4. Legal Counsel Meeting — Bring This Exact Question Set

- Is the proposed Guest → StayOS-controlled account → Host payout model legally permissible for StayOS's actual entity and operating structure?
- Does holding/controlling customer funds trigger a payment-system / PSP license or another regulated structure?
- What legal characterization should StayOS use: marketplace/intermediary/platform/agent/etc.?
- What liability/disclosure obligations apply to host cancellation, guest cancellation, no-show, refunds and payout timing?
- What PDPL/KYC permissions, notices, retention rules, or approvals apply to the planned KYC process?
- What Consumer Protection Law disclosures are mandatory?

■ What governing law and dispute forum should the terms use?

■ Are there short-term-rental or property-operation regulatory requirements relevant to the actual supply model?

5. Founder Decisions / Confirmations

Decision	Current documented position	Founder status
Host-side commission	10% + additional 2% platform share in latest legal/commercial terms	■ Confirm / change
Guest fee	4%	■ Confirm / change
Payment deadline	24 hours	■ Confirm / change
Refund processing target	5 business days	■ Confirm / change
Host payout target	3 business days	■ Confirm / change
Host cancellation	100% guest refund	■ Confirm / change
Guest no-show	No refund	■ Confirm / change
Host no-show	100% guest refund	■ Confirm / change
First 1–10 hosts	Manual ownership/authorization confirmation	■ Confirm

6. First 1–10 Transactions — Founder Operations

- Identify and manually authorize each host before publishing the listing.
- Record booking ID, guest, host, property, dates, GMV, fees, payment status and payout status.
- Verify payment proof manually before confirming the booking.
- Maintain a simple accounting/reconciliation sheet for every transaction.
- Calculate commission and host payout manually until automated payout is legally/provider-supported.
- Record every cancellation, refund, no-show and exception with timestamp and reason.
- Keep evidence for payment, refund and payout until the accountant/legal retention rule is finalized.

7. Accounting / Finance

- Decide who is the accountant/bookkeeper for the Alpha period.
- Establish a transaction ledger: GMV, guest fee, host-side deductions, payment cost, refund, payout, net platform revenue.
- Confirm tax/VAT treatment with accountant/counsel; do not infer tax treatment from the product model.
- Replace planning assumptions in the financial model with actual commitments as they become known.
- Keep the financial model clearly separated into Evidence / Decision / Assumption.

8. Operational / Supply Actions

- Run the existing discovery engine.
- Contact real New Cairo owners/operators.
- Convert candidates into owner-authorized listings.
- Complete KYC/onboarding and admin approval.
- Track live listings and booking outcomes.
- Do not publish public-web candidates as StayOS listings without owner participation/authorization.

9. Accounts / Credentials — Keep Outside Repository

- Payment provider account(s)
- Bank / Vodafone Cash business account
- Production email/domain
- Hosting / deployment account
- OTP provider
- KYC provider
- App Store / Google Play organization accounts, when launch requires them
- Any production secrets/API keys

Security rule: store secrets only in the approved secret-management mechanism. Never paste API keys, passwords, OTP secrets, private keys, or bank credentials into project documentation.

10. Items You Do NOT Need to Do Now

- x Do not build Paymob integration before provider/legal confirmation.
- x Do not build Stripe/Akedy alternatives in parallel.
- x Do not build a new payment architecture.
- x Do not add mobile, messaging, wallets, reviews, or advanced scale features merely because they are possible.
- x Do not create standalone legal documents that the Gap Register intentionally defers unless counsel says they are required.

11. Final Founder Completion Test

- Real collection account exists and is correct.
- Legal entity/registration information is available.
- Counsel has addressed the genuine legal blockers.
- Alpha commercial-rate conflict is resolved and reflected everywhere.
- Refund tiers + refund_days are confirmed.
- Host payout timing/method is confirmed.
- Paymob outreach has been sent and response is tracked.
- First 1–10 host authorizations can be evidenced.
- Manual accounting/reconciliation is ready.
- No document claims escrow/automation/legal approval that does not actually exist.

Important: This pack intentionally does not decide Egyptian legal questions. Those are escalation items for qualified counsel. It also does not treat provider marketing or technical capability as legal permission.
